

FUNDING SCIENCE SERVICES

Resources Allocated to Science Services in the 2001-2003 Biennium

Legislatively appropriated state and federal funding for Science Services comes from a variety of sources, reflecting the bureau's wide array of services and customers. Science Services operates much like a DNR administrative region, managing its own infrastructure and overhead statewide. Over the 2001-2003 biennium, Science Services saw a reduction in its appropriated funding. To date, cuts have been absorbed without significant reductions in services. Further cuts, however, will necessitate service reductions. During this same period, Science Services staff brought in more than \$4.9 million in outside funding, primarily grants.
